Winner of the Sustainable Leadership & Recycling Award, Brief synopsis and refresher

- Hr Björkmans Entrémattor has taken a great leap forward in their environmental work. After two years of development, their new state-of-the-art and patented water recycling system is now in place.
- They now recycle 98 percent of their dirty and used laundry water and they'll be able to save approximately 16 million litres of water annually
- The company also uses bio-gas, wind power and solar energy to heat their premises and the laundry water which is always kept at a low temperature. Most of their distribution vehicles run on biogas, some on HVO001 and some are electric.
